

# COMPEL® 2

## NETWORK CONTROL SYSTEM

### APPLICATIONS

#### Broadcasting

- **Linear TV Distribution**
- **File Based Distribution**
- **Broadcast Signage**

#### Private Media Networks

- **Digital Signage**
- **Corporate Communications**
- **Gaming Networks**
- **On-Demand Training**

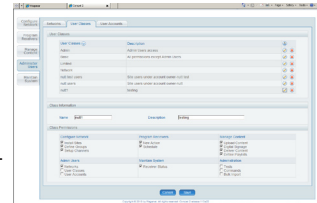

### BENEFITS

- **Control satellite and terrestrial content distribution**
- **Support multiple networks**
- **Support multiple users per network**
- **Digital signage tools**
- **Improved user interface**
- **Scheduling and automation**
- **Scalable network expansion**

WEGENER's 4th generation network control system, COMPEL® 2, is a flexible, open architecture system that provides simplified operations for dynamic media distribution via satellite or terrestrial paths. It optimized to support multiple applications for content providers, TV, and digital signage. Compel 2's modular design provides extensive opportunities to scale network expansions and tailor video, audio and data applications.

#### Support Multiple Users

Allow multiple, individually permissioned users to simultaneously take control of their individual responsibilities for network operations. Take advantage of digital file-based workflows to collect content from multiple users and distribute programming in non-real time.

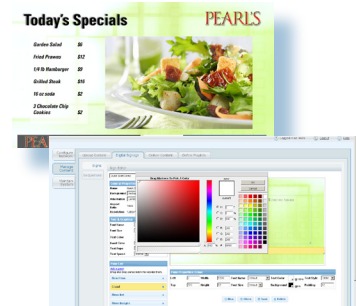

#### Support Multiple Networks

The web browser interface streamlines support for multiple networks with enhanced permission-based access and segregation of network data. Support multiple clients or departments as separate, independent networks.

#### Digital Signage Tools

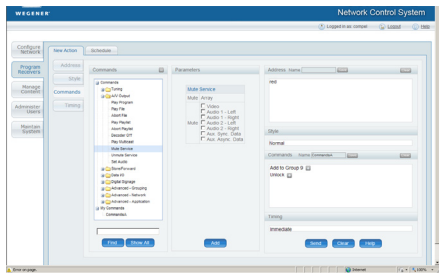

Develop new ways to customize the end-user experience in healthcare, houses of worship & retail environments. Enhance communication and advertising strategies using Compel 2 digital signage tools. New integrated standards-based ingest tools help streamline content management and optimize media player output. User-friendly screens help design, schedule and sequence custom combinations of video, graphics and text information overlays.

WEGENER®

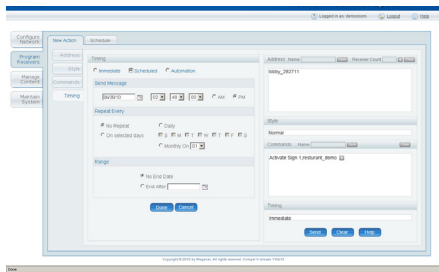

OPTIMIZING MEDIA DISTRIBUTION

# COMPEL 2 - NETWORK CONTROL SYSTEM

## Improved User Interface

Compel 2 offers better process management for complex media distribution tasks. A 'shopping cart' interface helps collect commands, addressing and scheduling information into one screen for quick review and editing. New 'My Receivers' and 'My Commands' macros help streamline activation of repetitive tasks. Compel 2 continues a long heritage of targeted delivery of finely-grained content with improved network addressing and timing interfaces.

## Scheduling and Automation

Compel's powerful actions can be invoked in real time or scheduled to occur at fixed or repetitive intervals. Actions can repeat around the clock, and at specific days of the week or days of the month. Actions can even be triggered by production automation systems via contact closures, TCP/IP events or DPI triggers.

## Scalable Network Expansion

WEGENER offers two versions of Compel 2 network control to scale growth according to business and/or operational needs.

Subscribe to CompelConnect.com™ for access to a shared, web-based version of Compel 2. The Software-as-a-Service (SaaS) package offers basic management tools for video content distribution, digital signage, scheduling, playout control, and health & status monitoring of WEGENER iPump media players via the Internet.

Purchase the full featured hardware/software platform for additional functionality and privacy for live satellite broadcasts and management of 1000+ receiver databases. Take full advantage of WEGENER's hybrid network control for strategic management of media players via satellite and terrestrial delivery paths.
